

BLOOD TRANSFUSION ARTEFACT RECORD	
NUMBER	AA-054
ITEM / TITLE	HIGH TITRE ANTI-A &/OR ANTI-B [BAR CODE] LABELS
PHYSICAL DESCRIPTION	Small (approx. 1.5 x 1 inch) white adhesive 'PLASMA CONTAINS HIGH TITRE ANTI-A &/OR B TRANSFUSE TO Gp 'O' RECIPIENTS ONLY' labels - red writing. Each label also has a bar code. Original labels on a strip of backing paper – label attached to luggage type card label.
OTHER INFORMATION	The adhesive labels were removed from the backing paper and attached to small (approx. 2.75 x 1.5 inch) luggage type card labels. The 'luggage label' was tied to appropriate group O blood donations. <i>Note: These labels were used for labelling blood donations found to contain high titre anti-A and/or anti-B to identify those group O donations that should only be transfused to group O recipients, i.e. to avoid transfusing high titre antibody in the plasma of the group O whole blood donation to a non-group O patient.</i>

PHOTOGRAPHS OF THE ARTEFACT	
 <p>Three yellow labels stacked vertically. Each label has red text that reads: "PLASMA CONTAINS HIGH TITRE ANTI A &/OR B TRANSFUSE TO Gp 'O' RECIPIENTS ONLY" followed by a barcode.</p>	 <p>A single yellow label with red text and a barcode, attached to a small white circular tag. The text on the label is: "PLASMA CONTAINS HIGH TITRE ANTI A &/OR B TRANSFUSE TO Gp 'O' RECIPIENTS ONLY".</p>
